

**BY DESIGN**

**Engineering  
Stability**

**Building  
Trust**

At By Design, we provide advanced ground engineering solutions with a focus on injection, compaction/pressure grouting. These proven methods allow us to strengthen distressed foundations, fill voids under ground slabs, stabilize soil, and resolve geotechnical underground weaknesses—ensuring safety, durability, and confidence.

## **OUR CORE EXPERTISE**

Injection Grouting and  
Compaction/Pressure Grouting

### **Building Stabilization**

- Compaction / Pressure Piles
- Jacking of Foundations
- Void Filling under Surface Beds
- Rocking (Curled) Slabs

### **Geotechnical Applications**

- Soil and Embankment Improvement
- Stabilization of Slip Planes
- Dam Grouting

- **Specialists in Grouting:** Focused expertise where it matters most.
- **Efficient & Reliable:** Minimizing disruption, maximizing long-term stability.
- **Proven Results:** Trusted by engineers and property owners alike.
